#### **DETAILED ACTION**

### Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 09/20/2004 has been entered.

## Response to Arguments

2. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.

## Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Art Unit: 2611

4. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Boyer et al. (US 2003/0066085 A1) in view of Lawler et al. (US 5,907,323).

Regarding claim 1, Boyer discloses a method of creating a semantic summary of a video comprising:

identifying a domain of video (identifying program guide (e.g., by time) that contains the video, e.g., Primal Fear – figure 16);

using the domain to locate information related to the video at a source other than the video (using program guide, e.g. by time, to locate information related to the Primal Fear at data server 82. par. 0065, par. 0105);

extracting a datum related to a semantic event from the information (extracting program information related to PRIMAL FEAR from program information-par. 0105);

identifying a portion of the video related to the datum (identifying program information such as program title, running time of the program, a brief description of the program, and a description of program type or genre.... see par. 0105):

displaying summary information relative to the video to a user (displaying brief description of video in box 236 to user – figure 16 and par. 0105). However, Boyer does not specifically disclose the semantic event describing a portion of the video.

Lawler discloses the semantic event describing a portion of the video (title or information describing an episode of a video program – col. 7, lines 6-44; col. 8, lines

Art Unit: 2611

20-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Boyer to use the teaching as taught by Lawler in order to allow user to easily locate desired portion of video.

Regarding claim 2, Boyer teaches the information is a textual summary of events (titles of events in program guide or textual summary of event in information box 236, figure 16).

Regarding claim 3, Boyer teaches the information is included in a worldwide web site (program guide 218 is a web page provided from web server 86 – figure 3).

Regarding claim 4, Boyer teaches the information is included in an electronic program guide (figure 16).

Regarding claim 5, Boyer teaches the domain is identified from an electronic program guide (Time page 218 in figure 16 is identified from program guide option in figure 15 – par. 0102- par. 0105).

Regarding claim 6, Boyer teaches selection of datum by a user of the summary (e.g. selection PRIMAL FEAR by a user of program guide – par. 0105, figure 16).

Art Unit: 2611

Regarding claim 7, Boyer teaches a method of abstracting video comprising the steps of:

locating an index of the video from a source external to the video (locating video information such as title, running time, channel, etc. of the video from data server 82, figure 3 and par. 0065);

identifying a domain of the video for creating a video abstraction (select program guide option and By time page option for creating a video program guide By Time – figures 15-16 and par. 0089);

using the domain together with the index to identify the video for inclusion in the video abstraction (e.g. using program guide with program information (title, running time, channel, etc. to identify the video (e.g. PRIMAL FEAR) for inclusion in video abstraction – figure 16 and par. 0105);

extracting the identified program information of the video to form the video abstraction (e.g. extracting program information of PRIMAL FEAR and display on page 218 – figure 16 and par. 0105); and displaying the video abstraction to a user (displaying program information to user – figure 16). However, Boyer does not specifically disclose portions of video.

Lawler disclose portions of video (episodes of video – col. 7, lines 6-44; col. 8, lines 20-67). Therefore, it would have been obvious to one of ordinary skill in **th**e art at the time the invention was made to modify Boyer to use the teaching as taught by Lawler in order to allow user to easily locate desired portion of video.

Art Unit: 2611

Regarding claim 8, Boyer teaches the index is included in a worldwide web site (page 218 is web page provided by web server 86 – figure 3).

Regarding claim 9, Boyer teaches the index is included in an electronic program guide (program title, running time, channel, etc. is included in page 218 – figure 16).

Regarding claim 10, Boyer teaches the step of identification of the domain by a user of the abstraction (user selects program guide option, and By Time option- figures 15-16).

Regarding claim 11, Boyer discloses a method of creating a semantic summary of a video comprising the steps of:

identifying a domain of video (identifying program guide (e.g., by time) that contains the video, e.g., Primal Fear – figure 16);

using the domain to locate a textual summary of the video (using program guide, e.g. by time, to locate a textual information such as title, brief description of Primal Pear- figure 16, par. 0105);

locating content in the video corresponding to the datum (locating content in selected program corresponding to the selected title – par. 0105);

extracting the content related to the semantic event from the video corresponding to the datum for inclusion in a semantic summary (extracting the content related to the event (e.g. a hot shot) from the selected program corresponding to the datum for inclusion in program guide box 236 including at least a portion, such as title, actor, director, etc. of

Art Unit: 2611

the selected program – figure 16 and par. 0105). However, Boyer does not specifically disclose semantic summary including at least one portion of the video.

Lawler disclose semantic summary including at least one portion of video (summary including at least one episode of video – col. 7, lines 6-44; col. 8, lines 20-67).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Boyer to use the teaching as taught by Lawler in order to allow user to easily locate desired portion of video.

Regarding claim 12, Boyer teaches a method of abstracting video comprising the steps of:

locating an index of the video in at least on of a worldwide web site and a program guide (locating video information such as title, running time, channel, etc. of a video from web server 86 and a program guide – figures 3, 16 and par. 0089); identification of a domain of the video for creating a video abstraction by a user (user select program guide option and By Time option for creating a video program guide By Time – figures 15-16 and par. 0089);

using the domain together with the index to identify video information of the video for inclusion in the video abstraction (e.g. using program guide with program information (title, running time, channel, etc. to identify information of the video (e.g. PRIMAL FEAR) for inclusion in video abstraction – figure 16 and par. 0105);

Art Unit: 2611

extracting the identified video information of the video from the video to form the video abstraction (e.g. extracting program information of PRIMAL FEAR and display on page 218 – figure 16 and par. 0105). However, Boyer does not specifically disclose portions of video.

Lawler disclose portions of video (episodes of video – col. 7, lines 6-44; col. 8, lines 20-67). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Boyer to use the teaching as taught by Lawler in order to allow user to easily locate desired portion of video.

### Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dodson et al. (US 6,184,877) teaches system and method for interactively accessing program information on a television.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Son P Huynh whose telephone number is 703-305-1889. The examiner can normally be reached on 8:00-5:30.

Art Unit: 2611

7. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christopher C Grant can be reached on 703-305-4755. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

8. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
